

RECURRING BILLING SAMPLE SOURCE CODE

Example "association" Request using plan "monthly":

https://secure.planetauthorizegateway.com/api/transact.php?username=test123&password=test1234&amount=10.00&cc_number=4111111111111111&cc_exp=1010&cvv=123&product_sku_1=monthly

Example Response:

response=1&responsetext=SUCCESS&authcode=123456&transactionid=569919763&avsresponse=&cvvresponse=N&orderid=&type=&response_code=100

You will have to record the "transactionid" of transaction submissions that are associated with a plan. In the next operation, you will delete the customer based on their transactionid:

Example Deletion Request:

https://secure.planetauthorizegateway.com/api/transact.php?username=test123&password=test1234&delete_recurring=569919763

Example Response: response=1&responsetext=Recurring Transaction

Deleted&authcode=&transactionid=0&avsresponse=&cvvresponse=&orderid=&type=&response_code=100

ASSIGN CUSTOMER TO MULTIPLE PLANS

Developers must pass the value of the associated Plan SKU in the variable 'plan_sku_1'
Example "association" Request using plan "01":

https://secure.planetauthorizegateway.com/api/transact.php?username=test123&password=test1234&amount=10.00&cc_number=4111111111111111&cc_exp=1010&cvv=123&product_sku_1=01

The purpose of # at the end of product_sku_# is to allow association to more than one plan. Example "association" Request using plan "01" and plan "02":

https://secure.planetauthorizegateway.com/api/transact.php?username=test123&password=test1234&amount=10.00&cc_number=4111111111111111&cc_exp=1010&cvv=123&product_sku_1=01&product_sku_2=02
